OMZ* Organo Sorbant is a patented, modified alumino silicate that is designed to absorb anions such as chromate, selenate, sulfate, hydrocarbons (such as benzene, toluene, and xylene), heavy metals (such as lead and cadmium), and various petroleum products (such as oil) from aqueous waste streams.

**How OMZ Works**

The basic concept involves imparting hydrophobicity to the base alumino silicate. To do this, the alumino silicate substrate is coated with a strongly bound hydrophobic compound. Other hydrophobic chemicals, such as hydrocarbons, prefer to combine with the surface-modified particles rather than maintaining suspension in water. The treated alumino silicate also absorbs inorganic oxyanions such as chromate, selenate and sulfate while maintaining its natural sorption capacity for heavy metals. The diagram below illustrates the concept of how OMZ works. The base media of OMZ is CGL type Z100, an alumino silicate with an exceptional cation exchange capacity. The modifying agent is HDTMA - a strong cation that replaces other cations on the surface of Z100 producing a surface anion exchanger.

*U.S. Patent Nos. 5278112, 5314852, and other patents pending*
Why OMZ is Superior to Tailored Clays

Tailored clays have been used successfully for a number of years to adsorb organic contaminants. OMZ, because it is not a clay medium but an alumino silicate, is a better alternative. When water passes through a clay medium, the clay particles expand reducing the interparticle space and lowering the permeability of the clay medium. Indeed, the tailoring process itself, due to coagulation of the tailoring agent, may cause a further reduction of permeability. The OMZ alumino silicate is a large network of open channelways similar to a sponge with uniform holes and a high cation exchange capacity. Unlike clay particles, this structure is rigid and stable (even under aqueous conditions) allowing more contaminants to be adsorbed in its open channelways.

### DESCRIPTION

Buff or off-white granules of an alumino-silicate base modified with a quaternary ammonia compound. Standard particle sizes are 6 x 14 mesh or 4 x 6 mesh.

### STANDARD PACKAGING

- 100 Pound Fiber Drums
- 400 Pound Fiber Drums
- 80 Pound Bags
- 2000 Pound Super Sacks

### PROPERTIES OF OMZ

</tbody>
</table>

OMZ can be effective in the removal of the following contaminants from waste streams:

### ORGANIC CONTAMINANTS

- anthracene
- benzene
- chloroform
- creosote
- ethyl benzene
- diesel fuel
- fluorene
- fulvic acids
- grease
- humic acids (TOC’s)
- indeno pyrene
- naphthalene
- non-ionic surfactants
- penenthrene
- oil
- pentachlorophenol
- perchloroethylene
- pyrene
- solvents
- toluene
- total organic carbons
- trihalomethane

### HEAVY METALS

- aluminum
- antimony
- arsenic
- barium
- cadmium
- calcium
- chromium
- cobalt
- copper
- iron
- lead
- magnesium
- manganese
- mercury
- nickel
- selenium
- silver
- tin
- zinc
